Full Stack Web Dev. Trainee / Industrial Placement - Loughborough

Opportunity
We are looking for a Computer Science or Software Engineering placement student for a 12 or 15 months term. You would be working as a trainee full stack developer.

About Citel
We work closely with the company's team in downtown Toronto, and provide web software systems to major telecoms companies in Canada. We develop provisioning, self-service and billing services to facilitate business VoIP services.

The office you would be working from is based on Loughborough University campus. We regularly take on industrial placement students from the university.

This is a great opportunity to learn and be really involved.

Working at Citel
You would be regularly using industry standard tools, including but not limited to those listed in the sidebar. The web framework we use is Django/Python.

We use Agile methods (scrums, sprints, use cases etc.) as part of our development process. The work you will be involved with will be highly varied, from web security to testing and dealing with customer requirements.

All our staff are given the opportunity to propose training courses to fill in gaps in understanding and then share that knowledge with the rest of the team. We have quarterly review process where we check in on your soft and technical skill improvements, setting goals with cash bonuses. We also try our best to tailor your placement to include your interests so that you can leave the company at the end of the year with the best possible CV.

If this sounds like the kind of thing you might be interested in we would love to hear from you.

Please note, Citels web presence in the UK is focused on our VoIP hardware side of the company whereas this role is within our contracting arm, so if you would like any more information regarding this role please do not hesitate to get in touch.
